

## URGENT: Wolves in Western Canada need YOUR help now!

**Wolves in British Columbia are running out of places to hide.** In January 2015, the provincial government announced plans to kill up to 184 wolves living in British Columbia before the snow melted. Though they were only successful at killing 84 wolves last winter, they plan to re-start January 2016 and continue the wolf killing program for a minimum of 5 years. Wolves are chased by helicopters until they are exhausted, and then shot under the guise of helping to recover dwindling caribou herds in the South Selkirk and South Peace areas. Some of the wolves in these areas have been radio-collared, and will be unknowingly leading sharp-shooters to their betrayed families.

A sad reality is that caribou are in this situation because of us, not because of wolves. The province has knowingly allowed industry to destroy caribou habitat for 50 years. Activities such as energy development, logging, mining and high-impact recreation continue in critical caribou habitat. As a consequence of our neglect, the government has sanctioned the killing of one species to save another. [Learn more about the development of this conservation dilemma and how to become involved at www.wolfawarenessinc.org.](http://www.wolfawarenessinc.org)

**FACT:** Wolves are emotional and intelligent beings whose predation on caribou is facilitated by habitat destruction.

**FACT:** Wolves are a **keystone species, capable of causing trophic cascades** that increases biodiversity and facilitates large-scale processes in our wilderness ecosystems.

**FACT:** A death sentence for wolves will not save endangered caribou.

*We the public deserve to be informed on how our tax dollars are being spent, to what end, and for how long.*

*We deserve to know how wildlife and wild places are being cared for.*

*We deserve to have our input listened to and considered.*

The decision to kill more wolves is **scientifically unsound**. All evidence to date shows that killing wolves does not reduce predator numbers for more than a season since their behaviour allows populations to rebound quickly and fill in the vacant space created where resident wolves have been killed. No wonder this outdated management practice has consistently failed to increase ungulate populations long-term. This is not the first time wolf helicopter killing and sterilization has occurred in B.C. **However, with your voice, we can work to ensure it is the last.**

This is also a **question of animal welfare**. The morality of causing harm to hundreds of intelligent and sensitive animals for any reason should be questioned. Are we prepared to spend the next several decades shooting wolves from helicopters in a vain attempt to maintain small herds of caribou in degraded habitat? Areas that have been protected for caribou, such as in the South Selkirk region, are not only small, but they are isolated. Small, isolated populations of caribou will likely be wiped out by disease outbreak, natural disasters or hard winters whether or not every wolf family in the area is scapegoated and murdered.

**FACT:** Aerial shooting is not an approved method under Canada's current guidelines on Approved Animal Care.

**FACT:** **The war on wolves is playing itself out in Alberta and demands just as much attention and participation.**

More than 800 wolves have been killed under the guise of protecting the Little Smokey Caribou herd in habitat 95% disturbed by oil and gas infrastructure. Wolves were killed in strangling snares, gunned down from helicopters and poisoned using elk and moose killed and laced with strychnine. Indiscriminate weapons, snares killed 676 other animals, *including 2 caribou*. There is no way to estimate how many non-target animals died of strychnine poisoning.

These provincial caribou recovery plans are not built on an understanding of wolf ecology nor conservation ethics. Instead, an apparent pre-determined agenda which encourages killing wolves has been exposed. In addition to opposing the destruction of wolves in a last ditch effort to save caribou, we stress the importance of instituting effective conservation measures to preserve old-growth habitat critical to the survival of caribou, and to keep humans out of sensitive areas. To win this battle, industrial encroachment must be halted and habitat allowed to regenerate.

Please become informed and involved. This is a defining time for the values of Canadians.
